JULY – SEPTEMBER APPEAL 2026

APPEAL FOR FUNDS TO ASSIST SCHOOL STUDENTS IN ETHIOPIA TO ACCESS POTABLE WATER

The Bethany Fathers' activities in Goro and Galliyarogda, Ethiopia, have focused on the provision of educational services, healthcare, community wellness and food security. They also continue to provide treatment for the endemic podoconiosis disease, together with malnourishment and general medical aid.

The Fathers' Goro school currently conducts classes from kindergarten up to Year 6. In December last year almost 600 students were enrolled, and the school obtained the highest examination results in their village. The goal this year is to be the most successful school in the entire district.

Despite the construction of water tanks on school property and the distribution of jerry cans to the local population, the shortage of potable water continues to be problematic.

To resolve the issue a new open well is being dug on the school premises with a separate water connection installed for kindergarten students. Impressively, two older Committee sponsored students have worked on a needed water tank and tower (see photos below right).
